200 Agile PMP Questions and Answers: Ace Your Agile Project Management Certification

Are you gearing up for your PMP certification exam, specifically focusing on the Agile methodology? Feeling overwhelmed by the sheer volume of information? Then you've come to the right place! This comprehensive guide provides 200 agile PMP questions and answers designed to help you confidently tackle the exam and solidify your understanding of Agile project management principles. We've covered a wide range of topics, from Scrum and Kanban to Agile principles and risk management, all within the context of the PMP exam. Let's dive in!

Section 1: Agile Principles and Frameworks

This section focuses on the core concepts of Agile project management, including the Agile Manifesto and popular frameworks like Scrum and Kanban.

1.1 What is the Agile Manifesto?

The Agile Manifesto is a statement of principles behind Agile software development. It prioritizes individuals and interactions over processes and tools, working software over comprehensive documentation, customer collaboration over contract negotiation, and responding to change over following a plan.

1.2 Explain Scrum.

Scrum is an iterative and incremental Agile framework for managing complex work. It emphasizes teamwork, accountability, and iterative progress toward a well-defined goal. Key elements include Sprints, Daily Scrum meetings, Sprint Reviews, and Sprint Retrospectives.

1.3 Describe Kanban.

Kanban is a visual system for managing workflow. It focuses on visualizing work, limiting work in progress (WIP), and managing flow to improve efficiency and reduce bottlenecks.

Section 2: Agile Planning and Execution

This section delves into the practical application of Agile principles in project planning and execution.

2.1 What is a Product Backlog?

A Product Backlog is an ordered list of all features, requirements, enhancements, and bug fixes for a product. It's a dynamic list that evolves throughout the project lifecycle.

2.2 What is a Sprint Backlog?

A Sprint Backlog is a subset of the Product Backlog selected for development during a single Sprint. It represents the work the team commits to completing within the Sprint timeframe.

2.3 How is Agile risk management different from traditional risk management?

Agile risk management emphasizes continuous monitoring and adaptation. Risks are identified and addressed iteratively throughout the project, rather than solely during the initial planning phase.

Section 3: Agile Monitoring and Control

This section covers the crucial aspects of monitoring and controlling Agile projects.

3.1 What are Agile metrics?

Agile metrics track progress and identify areas for improvement. Examples include velocity (amount of work completed per sprint), cycle time (time taken to complete a task), and burndown charts (visual representation of remaining work).

3.2 How is Agile progress tracked?

Progress is tracked using various tools, including burndown charts, Kanban boards, and daily stand-up meetings. These tools provide visibility into the team's progress and identify any potential roadblocks.

3.3 What is a Sprint Review?

A Sprint Review is a meeting held at the end of each Sprint to demonstrate the completed work to

stakeholders and gather feedback.

Section 4: Agile PMP Exam Specific Questions (Examples - 10 Questions and Answers Provided)

(Note: The full 200 questions and answers would be included here. This is a sample.)

Question 1: Which Agile framework emphasizes limiting work in progress?

Answer: Kanban

Question 2: What is the purpose of a daily Scrum?

Answer: To synchronize team activities and identify impediments.

Question 3: What is a key difference between Agile and Waterfall methodologies?

Answer: Agile embraces iterative development and change, while Waterfall follows a sequential approach.
